Body Condition Related to Ketosis and Reproductive Performance in Norwegian Dairy Cows

It has been tried commercially, but has not survived due to these problems. For seasonal herds the treatment time required for OVSYNCH, PRESYNCH-OVSYNCH and Double OVSYNCH protocols are too long relative to the conception rates that can be achieved. But due to the cumbersome and meagre interpretations, this system was soon outdated.

Efficacy of Ovsynch Program on Reproductive Performance in Dairy Cattle: A Meta

Journal of Dairy Research, 65, 155-173. To achieve high submission rates to artificial insemination AI, which are critical to achieve a 365-d calving interval in seasonal calving herds, requires an effective, practical means of identifying each cow in oestrus. In: Dairy Integrated Reproductive Management.

Monitoring reproductive performance in dairy herds

Epistasis effects were 30% intra-chromosome and 70% inter-chromosome effects.

Body Condition Related to Ketosis and Reproductive Performance in Norwegian Dairy Cows

This technology can detect pregnancy status from as early as day 16 and has led to a priority patent filing filed 17 November 2015; UK Patent Application No. With due course of time, some other subjective methods were standardized.
