## The Moon, our own natural satellite

How do we study the Moon? He had reported that the distance between the Earth and the Moon is about 380,000 kilometers or 240,000 mi. Bodies which orbit planets are called moons. This early formation and close ties with young Earth makes the moon one of the most promising places to explore the birth and development of our solar system and home planet.

## The Moon: Earth's natural satellite

The lunar surface is relatively non-reflective, with a reflectance just slightly brighter than that of worn asphalt. Ask yourself why any evidence not conforming too current thinking is non-sense and not investigated? This does not prove the moon is fake.

## ORRERY: Moon

For example, NASA's Lunar Reconnaissance Orbiter has been circling the Moon and sending back measurements since 2009. Size and Distance With a radius of 1,079. Twenty-four humans have traveled from the Earth to the Moon.

## StarChild: The Moon

So, while the particles themselves may not reside very long in terms of astronomical time, the clouds may have been a natural fixture since the birth of the Earth-moon system

## StarChild: The Moon

If Earth were the size of a nickel, the moon would be about as big as a coffee bean. Our Local Group is itself part of an even larger group, the. Natural satellite Satellite of Orbital speed average Time for one orbit Orbital radius average The Moon Earth 1.

## How Old Is Moon? Earth's Only Natural Satellite Is 85 Million Years Younger Than Previously Thought

During some stages of a lunar eclipse, the Moon can appear reddish. Studying these craters, combined with the geological dating of rocks brought

back during the Apollo missions, helps scientists not only but also calibrate a timeline for the ages of other solar system bodies. Moon phases Next to the Sun, the Moon is the brightest object in the sky.

### **Moon Facts** ☐

Earth is also 60 times brighter. On November of 1969, NASA intentionally crashed a lunar module that caused an impact equivalent to one ton of TNT on the Moon.

### **Moon Facts** ☐

Artist impression of Rhea's rings No moons that belong to moons have been found.
