Canada Basin, Arctic Ocean: Evidence against a rotational origin, Tectonics

The Sylvester was emplaced onto North America as the roof thrust to a foreland-style duplex within underlying North American strata.

Canada Basin, Arctic Ocean: Evidence against a rotational origin, Tectonics

The issues of final containment design and long term stewardship are addressed in the paper as well as some comments on lessons learned through the life of the project. A number of identified or potential source rocks exist in the Jurassic to Upper Cretaceous succession that are thermally immature to mature, the area has been subjected to extensional faulting resulting in associated roll-over anticlines, and porosity in the Parsons sandstones has been maintained by secondary porosity formation.

Most significantly, many gold deposits and occurrences are associated with ilmenite-series plutons which form the basis for the reduced intrusion-related gold deposit model Bonomi, Tullia, Maria Letizia Fumagalli, Marco Rotiroti, Rodolfo Perego, Fulvio Simonetto, and Pietro Capodaglio. During the Jurassic, periodic migrations of foraminiferal and ostracod genera and species, which were interrelated with large transgressions and climatic changes, took place in the initial late and mid-late Pliensbachian, initial early Toarcian, and the late Toarcian-early Aalenian. Ecotones between the realms e.

The distribution of ZFT ages shows two episodes of exhumation of the granitic plutons: the first episode is found to occur during 170 Ma — 120 Ma and affect the SW part of the Nanling Range; the second episode, a more regional exhumation event, occurred during 115 Ma- 70 Ma. Solar radiation received, slope gradients and snow cover were found to influence weathering of clasts across the study site.

Palaeobiogeography and palaeoecology of Early Cretaceous belemnites from the northern high latitudes

The geology denotes a transition from an active to a passive margin, which led to rapid modifications of crustal stress configuration and reactivation of older faults in the Cathaysia Block.

The Neocomian Parsons Group, northern Yukon and adjacent Northwest Territories (edition)

Author of Rehearsal, The Neocomian Parsons Group, Northern Yukon and adjacent Northwest Territories, How to Make Ends Meet, Barremian to Albian stratigraphy, Tuktoyaktuk Peninsula and south Mackenzie Delta, Northwest Territories, by J. Small differences in rock hardness measurements suggest some form of aspect control on rock weathering.

Bibliographies: 'Geology, Structural Northern Territory Arunta Block'

Rocks containing boron-poor, and relatively boron-rich komatiite 2. The TGP is characterized by vast, remote under-explored areas, unglaciated regions with variable oxidation depths and discontinuous permafrost, which, in combination with a still-evolving geological model, create significant exploration challenges.

The Early Jurassic to Aalenian paleobiogeography of the Arctic realm: Implication of microbenthos (Foraminifers and Ostracodes)

Research on the characteristics, distribution and timing of these gold deposits tests these classifications and supports an alternative interpretation.
