Biogeography

The role of biological classification in early plant and animal geography. World Regional Geography World regional geography studies various world regions as they compare with the rest of the world. Many of the top universities have botany degrees, but there has been a decline in recent years of students taking botany in favour of other environmental and natural sciences.

Economic Geography

The discipline of geography can be broken down into three fundamental areas of focus: physical geography, human geography, and world regional geography. Factors for comparison include both the physical and the cultural landscape. The colors, sizes, and shapes of the cultural landscape usually symbolize some level of significance regarding societal norms.

Botany: The Original Natural Science

Economic geographers have been rather proactive and positive to the contributions coming from other disciplines dealing with regional questions and to the necessity of establishing international networks. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. Cultural forces unique to a given place — such as religion, language, ethnicity, customs, or heritage — influence the cultural landscape of that place at a given time.
