Since -wildlife is a public resource, commonly of secondary value in land-use economics, its status and utilization as a land and water product generally depend on effective multiple-use policies.

Research Publications

If cattle eat only species A-C, and deer eat only species B-D, the competition is limited to species B-C. Influence of Land Management on Wildlife 117 There is a similar dearth of facts about the effect of juniper control on game populations.

Soil recovery and reclamation of mined lands

In recent decades there has appeared to be some division of public opinion relative to forestry; in particular, growing numbers of people generally have opposed harvesting timber crops.

Timber Growth on Graded and Ungraded Strip

Selective planting will be used where natural regenera- tion fails Line, 19641. Many studies reported increases of 200 to 300 percent or more in grazing capacity through mechanical or chemical control of sage- brush, or by burning Pechanec et al.

Plantation development and colonization of woody species in response to post

In fulfillment of contract J5140102. Mine subsidence prediction — From an art to a science.

Plantation development and colonization of woody species in response to post

Wildlife and outdoor recreation are recognized resources under both acts.

Mountaintop removal mining

Season of burning, frequency of burning, purpose and size of burn for wildlife purposes do not necessarily coincide with needs of other land uses and, accordingly, will vary with species, habitat and region.
