Feeding Young Dairy Calves

Tips for feeding dairy calves in a group management system At birth Separate newborns from fresh cows ASAP and hand-feed colostrum.

Dairy Calf and Dairy Heifer Management

Handling of pre-pasteurized milk and equipment requirements When handling large quantities of waste milk, dairy operators need to have the proper equipment. Acidic electrolyte solution may be fed immediately after a meal of milk as they may help protein coagulation and digestion.

Best Calf Management Practices From Birth To Weaning

Please to see other articles in this series. Make sure the newborn orphaned calf gets colostrum, even if it is from another nursing cow or goat. Meeting nutritional requirements is essential for adequate immune system function and calf health Pollock et al.

Housing, Feeding and Management of Calves and Replacement Heifers in Swedish Dairy Herds

Use only high quality flour not aflatoxin infested grain to constitute the feed. Good quality grasses Guinea, Napier etc. Urea should not be included in calf starters.

Nutrition and Feed Management: Unweaned Calves

Finally, equipment and procedures for handling waste milk may not be cleaned as thoroughly as for saleable milk. Osmotic pressure increases and pH is lowered in the intestine.

Milk Management

Clearly, using a commercial CMR to supplement waste milk will provide incomplete nutrition to young milk-fed calves. This minimizes fluctuations

in rumen pH and promotes healthy rumen conditions, even at relatively high rates of energy intake.

PPT

This is to prevent fattening, which increases disease risk at calving. Trettionio procent av besättningarna sparade mjölk från första umjölknings efter kalvningen även till kalvens andra mål. Dairy steers are an important part of the U.
