Use of major ion and stable isotope geochemistry to delineate natural and anthropogenic sources of nitrate and sulfate in the Kettle River Basin, British Columbia, Canada

Site specific information collected on each site listed in Table 4. Neither of these construction projects indicate buried wastes but only the adminietreion building would have required a foundation excavation. Nitrogen is an important nutrient for plant and animal survival and growth.

All Projects

The project also facilitated the utilization of fibre resulting from the wildfire risk reduction activities.

Modeling salinization and recovery of road salt

Findings can be used in future modelling to achieve carbon stewardship. COMPONENTS Sand PCfl-i PCA-2 PCA-3 PCA-4 PCa-5 TM4. The woody biomass will need to be ground or chipped to facilitate expedited decomposition through a process that creates a highly organic mulch that is very similar to peat moss in texture.

PA Environment Digest

The transport time of the water phase is therefore multiplied with $K_{gy} \cdot n$ equation 22 and alternatively the lipid transport time f_s divided by K_{qw} in equation 23. Project deliverables for Phase II comprise of a lake management plan that will clearly describe the methodologies and the results of each of the tasks described in the grant application. Other sites may be of concern, however based on available information it is not possible to confirm waste existence and potential environmental impact.

Research Reports

Lower and Middle Ordovician strata consist of shale, siltstone, argillaceous limestone and sandstone of the Glenogle Formation, and sandstone of the Tipperary Formation. The mafic flow and tuff unit contains pyroxene-biotite-hornblende phyric flows; lapilli, crystal and ash tuff with local sandstone and rare marl layers; porphyritic basalt; and pyroxene phyric basalt flows and tuffs. Rich Alloway II R-Adams is encouraging local anglers to provide feedback on issues pertaining to the Fish and Boat Commission through the use of a new online public comment webpage.
