Mid

The USDA Tropical Plant Genetic Resource Management Unit maintains longan and avocado germplasm at this site.

FEEDING EXPERIMENTS: Part I. Fattening Western Lambs. Part II. by Howard J. Gramlich

When evaluating forage, plant yield during the dry season is an important element to consider.

USDA ARS Online Magazine Vol. 56, No. 4

Special events: The 7th Annual Agricultural and Environmental Awareness Day was conducted on March 1, 2001.

USDA ARS Online Magazine Vol. 56, No. 4

Average total fibre NDF concentration values were 37. Wind chill is also important and cold and wet conditions are worse than cold conditions without rain. In 1937, partial funding was restored.

Mid

The Thoroughbred breeding herd was maintained until 1964. Just a few short miles south of Fallon, Nevada on US 95, the farm was first run by the USDA from 1925 to 1940 in a cooperative agreement with the Experiment Station. Due to a similar manual error, a second but less severe, flood occurred on 11 March 1997, 112 days post germination.

Ezra'a Research Station

It is the center for research on proteas and other southern hemisphere flora. They were exposed to wheel-line irrigation techniques, maintaining the

irrigation system, safe handling, and storage of all pesticides, pesticide applications, and calibrating spray equipment. Then World War II brought a huge demand for increased crop yields.

Lamb feeding experiments

Bernadine was elected a Fellow of the American Society for Horticultural Science, their highest honor 2007 and she received the OSU Alumni Association Distinguished Professor Award 2014.

Lamb feeding experiments

Conduct experiments on elephant grass production and management. It is probable that the dearth of information about this species is preventing the use of lablab to its full potential. Both interns have been hired on as student employees at the Main Station Farm due to their work ethic and skills learned through the internship program.
