Geolex — Ellemeham publications

Intensive work on management of ELVs is necessary in order to more successfully tackle this important environmental challenge.

**New constraints on Eocene extension within the Canadian Cordillera and identification of Phanerozoic protoliths for footwall gneisses of the Okanagan Valley shear zone**

It consists of polyhedral blocky- to locally columnar-jointed basalt lava and lithic juvenile orthobreccia Lj and Blith , which together extend along the entire length of the Icefall Nunatak outcrop. The conglomerate sample MK-211 i is an extreme example: others contain greater proportions of volcanic rock fragments Fig.

NGMDB Product Description Page

Large angular clast near the contact is accidental fragment of lava.
