## Details

By 1977 experimental plantings of several hundred wine-grape varieties showed that a number of vinifera cultivars could be recommended for the South Plains and Trans-Pecos Texas.

## TSHA

Most were table grapes or were intended for grape-juice production, though some were said to have merit for wine making. Improperly sealed corks leaked, dried out, and crumbled. But the evidence for domesticated grapes is later than that of East Asia, although similar to that of the western Asia grapes.

## The culture of the grape, and wine

Tiny pores in cork let in enough oxygen to permeate the wine as it ages. About 1900 state agricultural bulletins reported on experimental grape plantings all over the state. They recommended spacing, trellising, pruning, and other practices not very different from those recommended today.

## The culture of the grape, and wine

From the 1920s through the 1960s grape production remained small, with a number of small vineyards ranging in size from one-half to ten acres scattered around the state. However, as the movement grew, attention turned more to table grapes and varieties suitable for making sterilized grape juice. Now the largest wine producer in the state, it accounted for 67 percent of the 1.
