When secondary filters are used, the size of the openings is usually larger than that of the primary filter to minimize needed attention. Filtration of irrigation water is vital for drip irrigation schemes in order to avoid blockage of emitters as the internal passages of emitters are very small. Tub grinders are essentially larger, top-loaded wood chippers that are fed waste wood by bucket loaders or telehandlers.

Farmer Management of Groundwater Irrigation in Asia: Case Study of Management of Three Deep Tubewells in Tangail,

Bangladesh

This process is known as preset.

ENVIRONMENTAL STUDIES: Chapter 2:Natural Resources

Liming is the most important practice in the acid soils to improve productions.
