Publications Received on JSTOR

Such norm-based information can typically be gleaned from personality tests or other rating scales as well. Disabilities, developmental handicaps, and substance misuse: A review.

Appendix D: Specific Mental Disorders: Additional Guidance for the Counselor

Changes, influenced by the moderator variable of sex, were in the direction of becoming more like societal expectations for adult roles.

Minnesota Multiphasic Personality Inventory

Elmer 1977 compared seventeen abused children with seventeen matched children who experienced accidents. Finkelhor 1986, in his review of the literature, found four forms of impact on child victims of sexual abuse: traumatic sexualization, stigmatization, a sense of betrayal, and feelings of powerlessness.

Adolescent Personality and Behavior — University of Minnesota Press

Child Maltreatment in the United States. The earliest studies using the MMPI with adolescents sought to determine whether the instrument could reliably and validly identify subgroups of youth predisposed to delinquency.

On the Justifications for Civil Commitment on JSTOR

According to the authors, the emotional development of children has not received enough attention; the emphasis in research has traditionally been on cognitive development. In addition to competence in measurement theory, knowledge of developmental processes and basic characteristics of childhood psychopathology is also essential.

Hathaway, Starke R. 1903

Compulsions are repetitive rituals and acts that people are driven to perform and which they perform reluctantly to prevent or reduce distress.

Abnormal Psych

The readability of child personality assessment instruments. My task in this introductory essay is to develop a statement that synthesizes the issues raised and discussed, the knowledge compiled, and the conclusions assessed by the individual contributors to this volume.

Normal cross

A test can be extremely well normed and extremely reliable and yet have no validity for the assessment of personality. Thus, what can seem to be a small diagnostic matter can be significant, and in this case it is likely that bipolar I and bipolar II represent meaningfully distinct clinical entities. Psychoeducation Families and individuals often benefit from education about depression and suicidality, including warning signs, resources for help, and the importance of addressing this problem.
