

Forest resource inventories - proceedings of a workshop

Dept. of Forest and Wood Sciences, Colorado State University - Forest Inventory and Analysis Using GIS and Geospatial Systems

Description: -

-
Land grants
Education, Higher
District of Columbia
Forests and forestry -- Congresses. Forest resource inventories -
proceedings of a workshop
- Forest resource inventories - proceedings of a workshop
Notes: Includes bibliographical references.
This edition was published in 1979

Forest Inventory and Analysis National Program

User Alert: June 14, 2021: EVALIDator continues to experience stability issues. The outputs from these analyses were used to calculate LOS. In order to determine the outcome of a thinning practice before trees are cut, a GIS program was developed to simulate the post-thinning trees spacing based upon parameters assigned by the planner.

Proceedings of the National Silviculture Workshop: Economics Of Silvicultural Investments;...

It reviewed the forest landscape changes over time, linked timber measurement to the environment in geospatial context, and developed tools for forest management. Photo: First page of a Community Engagement Newsletter USDA Forest Service Last Modified: April 14, 2020. The remote sensing model was designed to identify forest landscape changes over time by using historical satellite imagery.

Forest Inventory and Analysis Using GIS and Geospatial Systems

The ultimate function of this AML program was to investigate the relationship between timber production and its underlying properties of local environment. In: Proceedings of the 4th Southern Forestry and Natural Resources GIS Conference, Athens, Georgia. A This project examines effectiveness of geospatial technologies such as GIS, geostatistics and remote sensing to conduct forest inventories.

Publications

It does not tell the timber volume on the ground, which is what foresters are most interested. In: Proceedings of the 25th Annual ESRI International User Conference, San Diego, California. These estimates will also determine spatial variation and uncertainty of previously mentioned forest parameters.

Forest Inventory and Analysis Using GIS and Geospatial Systems

Based on the classified forest cover type map, landscape patches were identified and landscape metrics were calculated.
