Otter

The best sites support a continuous swathe of tall grassy vegetation to provide food and cover for the voles. To make matters worse, important vole habitat disappeared when people drained waterways or built near them.

Water voles, otters and mink

They have the densest fur of all mammals - this helps them maintain warmth in the ocean. The forehead, muzzle, and throat are white. The trusts have recorded many cases of accidental poisoning and in one instance the extermination of an entire group.

Otter surveys

In Cumbria, where water voles a century ago were everywhere, they are now restricted to just the Pennines.

North American Mammals

Levels of microbial biomass and activity were enhanced in tunnel walls.
