## Lasers in atomic, molecular, and nuclear physics (1986 edition)

The principal of and the interest on such notes shall be payable solely from. Atomic Physics Lecture Notes PDF P This lecture note covers the following topics: emission and absorption of light, spectral lines, Atomic orders of magnitude, Basic structure of atoms, The Central Field Approximation, Many-electron atoms, Energy levels, Corrections to the Central Field, Spin-Orbit interaction, The Vector Model, Two-electron atoms, Symmetry and indistinguishability.

## Lasers in atomic, molecular, and nuclear physics (1986 edition)

Some of the areas discussed are: atomic structure, atomic dynamics, accelerator-based atomic physics, molecular photoionization and electron-molecule scattering, astrophysics, laser spectroscopy, atmospheric physics, plasma physics, and applications. A section elucidates interfaces between the three fields and astrophysics, condensed matter physics, surface science, plasma physics, atmospheric physics, and nuclear physics.
