PFAS Response

The Model Ordinance is available in 2 formats; the MS Word version contains line numbers and the Adobe Acrobat version does not. Forty-five participants meeting all inclusion and exclusion criteria provided complete data at baseline and post-treatment.

Pretreatment Changes in Drinking: Relationship to Treatment Outcomes

Initial examination of the data revealed significant increases in percent days abstinent and decreases in drinks per drinking day during the pretreatment intervals. The targets differ in each stage.

Pretreatment Roles and Responsibilities

Anyone discharging wastewater into the surface waters of the state is required by law to obtain a National Pollutant Discharge Elimination System NPDES permit. By far, the most difficult task is identifying the source of the problem.

The 4 Stages and Targets of DBT

Discussion The results of this study demonstrate that, for some individuals, a significant amount of alcohol behavior change occurs after seeking treatment and before treatment begins. Timeline Follow-back TLFB; The TLFB is a calendar-based retrospective recall interview of daily alcohol use.
