### Age Of Discovery Geography

Why things are there and not elsewhere is an important topic in Geography, together with debates on space and place. Geographers study the location of the activities, carefully identify patterns using maps and find out the reasons for these patterns.

### Evolution of Geography

According to Hesiod, who is but little later than Homer, up in the far north were placed a people known as the Hyperboreani, or those who dwelt at the back of the north wind; whilst a corresponding place in the south was taken by the Abyssinians. Of the two hundred and seventy men who had started with the fleet, only eighteen returned in the Victoria. If we can predict successfully, we can plan and limit the extreme possibilities.

The publication of Huxley physiography presented a new form of geography that analysed and classified at the micro-level and then applied these to the macro-scale due to the view that the micro was part of the macro and thus an understanding of all the micro-scales was need to understand the macro level.
