Abstract: A novel method to prepare an advanced thermoelectric material has hierarchical structures embedded with nanometer-sized voids which are key to enhancement of the thermoelectric performance. Abstract: A touch sensing unit includes a base layer including a touch sensing area and a touch peripheral area, a touch electrode disposed in the touch sensing area, a touch line disposed in the touch peripheral area and electrically connected to the touch electrode, an inspection pad disposed in a pad area located at one side of the touch peripheral area, and an inspection thin film transistor disposed in the pad area and electrically connected to the touch line and the inspection pad. Solution-based thin film deposition technique enables preparation of stable film of thermoelectric material and void generator voigen.

Sang Hyuk Choi Inventions, Patents and Patent Applications

Potential application areas of this advanced thermoelectric material with nanovoid structure are commercial applications electronics cooling, medical and scientific applications biological analysis device, medical imaging systems, telecommunications, and defense and military applications night vision equipments. .

Abstract: The present disclosure relates to a sensor network, Machine Type Communication MTC, Machine-to-Machine M2M communication, and technology for Internet of Things IoT. Abstract: Provided are a CIS system and a method of processing the same using a low power multi-mode data path. The y embodiments provide an electronic apparatus controlled by a selection of one button positioned in a first remote controller for a first electronic apparatus, and a method for controlling the same.

Sang Hyuk Choi Inventions, Patents and Patent Applications

A subsequent thermal process creates hierarchical nanovoid structure inside the thermoelectric material. Abstract: The present disclosure relates to a positive active material for a lithium rechargeable battery and a lithium rechargeable battery including the same, which include a first compound

represented by Chemical Formula 1 and a second compound represented by Chemical Formula 2, and a content of the first compound is 65 wt % or more based of the positive active material of 100 wt %.

Sang Hyouk Choi, SR. Inventions, Patents and Patent Applications

The CIS system can implement multi-modes including a low power mode and a high speed mode, reduce the number of data transitions by merging data of the same color in a always-on low-power mode and a photo-shooting low-power PS-LP mode to reduce power consumption and process data in a high speed using a pipeline in a photo-shooting high-speed PS-HS mode. Abstract: The present invention relates to a negative electrode active material for a lithium secondary battery, which includes A first artificial graphite having an average particle diameter D50 of 15? Abstract: A memory device comprises: a first memory cell, and a second memory cell different from the first memory cell, wherein the first memory cell and the second memory cell are included in same memory block; a first word line connected to the first memory cell; a second word line, different from the first word line, connected to the second memory cell; an address decoder which applies one of an erase voltage and an inhibit voltage different from the erase voltage to each of the first and second word lines; and a control logic which controls an erasing operation on the memory block, using the address decoder, wherein while the erasing operation on the memory block is executed, the inhibit voltage is applied to the first word line after the erase voltage is applied, and the erase voltage is applied to the second word line after the inhibit voltage is applied. Pukhan it'al ch'ongsoryŏn chonghap taech'aek III : Pukhan it'al ch'ongsoryŏndŭl ŭi chillo silt'ae wa chŏngch'aek pangan yŏn'gu.

The use of any trade name or trademark is for identification and reference purposes only and does not imply any association with the trademark holder. The present disclosure may be applied to intelligent services based on the above technologies, such as smart home, smart building, smart city, smart car, connected car, health care, digital education, smart retail, security and safety services. Abstract: An electronic apparatus and a method for controlling the same are provided.

Sang Hyouk Choi, SR. Inventions, Patents and Patent Applications

Each composition and molar ratio of Chemical Formula 1 and 2 is as defined in the specification. Sŏul T'ŭkpyŏlsi : Orŭm MLA Citation Yŭ, Han-su.
