A history of discrimination, neglect, and abuse toward people with disabilities has occasionally led to distrust among some community members toward health care professionals. In the best respect model, physicians offer objective information about the patient, including diagnosis, prognosis, available treatment choices, and quality of life issues. Format: Trade Paperback Language: English Publication Year: 1990 Author: Ronald H.

Intellectual or Developmental Disabilities (IDD)

Additionally, demonstrations based on color differences may be more difficult for people with blindness to understand than demonstrations which emphasize changes in shape, temperature, or texture. Prior to initiating these discussions, the social worker must offer assurances and guarantees about the confidentiality of the information being elicited. If a physician feels there are urgent medical reasons indicating HIV testing, then counseling needs to address this and support the medical advice.
