

# Tekhnologiya obogashcheniya margantsyevykh rud

- - Części książki: „Nonferrous metals

Description: -

-

Syria -- History -- 750-1260

Fatimides

Women prisoners -- Cross-cultural studies.

Prisons -- Sweden -- Officials and employees.

Prisons -- Ireland -- Officials and employees.

Women prisoners -- Sweden.

Women prisoners -- Ireland.

Manganese ores.

Ore-dressing. Tekhnologiya obogashcheniya margantsyevykh rud

- Tekhnologiya obogashcheniya margantsyevykh rud

Notes: Bibliography: p. 238-[243]

This edition was published in 1981

Filesize: 22.84 MB

Tags: #Bezotkhodniya #tekhnologiya #pererabotki #rud #chernykh #metallov #(1988 #edition)

## Bibliografias: alloys

Image analysis of particle size distributions and growth method of tessellation were used to quantify the level of particle refinement and the homogeneity of the second phase spatial distribution. Eine Verschiebung der Defektniveaus proportional zum Ge-Anteil in der Legierung wurde beobachtet. Es wird gezeigt, dass H180 eine Barriere für den Löchereinfang von etwa 53 meV besitzt, was die Bestimmung des Ladungszustandes aus der Feldabhängigkeit der Emissionsrate erschwert.

## Tekhnologiya promyshlennogo osvoeniya kompleksnykh zheleznykh rud (1986 edition)

These treatments may degrade the microstructure. In this respect, inverted gate staggered type Thin Film Transistor produced and characterized for the first time after Combo-251 Pattern Generator was implemented.

## Części książki: „Nonferrous metals

The nucleation temperature of primary Fe-rich particles were found to increase with increased Fe, Mn, and Cr contents, i. Chai, Li-Yuan, Xiao-Bo Min, Wei-Chun Yang, Yong-Ming Chen, Yong Ke i Wei-Zhi Zeng. In general, although rapid solidification may suppress the coarsening of Si during solidification, the Si particulates may still coarsen during the subsequent thermo-mechanical treatment due to heat effect during consolidation and extrusion.

## Gornoe davlenie i tekhnologiya podzemnoy razrabotki rud na bol'shikh glubinakh (1990 edition)

In relation to the modification and grain refinement of Al-10Si alloys it was concluded that with the slowest cooling rate tested, additions of only grain refiner did not successfully produce equiaxed grains. Das Auftreten von zwei Niveaus wird durch zwei nicht-äquivalente Positionen des O-Atoms bezüglich der CH-Bindung erklärt. However, DI and BI have not been possible to relate to tensile properties.

## Gornoe davlenie i tekhnologiya podzemnoy razrabotki rud na bol'shikh glubinakh (1990 edition)

Experiments were performed at industrial foundry facilities and in a laboratory environment.

**Bibliografias: alloys**

PECVD deposited a-SiC<sub>x</sub>:H films over p-type crystal Si and metal substrates MIS and MIM were investigated by both admittance spectroscopy Capacitance or conductance vs.
