Overview

Students will likely need guidance and modeling to derive meaning from this part of the primary source text. This paper demonstrates why human rights measurement is important, how human rights have been measured to date, and how such measures can be improved in the future.

Global

Explanation: Students engage in informal evidence-based writing in response to each primary source and its text-dependent questions, and more formally demonstrate their skills in interpreting and writing from primary sources in the culminating performance task. HFS clients enjoy state-of-the-art warehousing, real-time access to critical business data, accounts receivable management and collection, and unparalleled customer service. Similarly in mathematics, students first are guided in reviewing and using basic statistical representations such as box plots in Math Lesson 2, then move through guided use and interpretation of more advanced statistical calculations and representations in Lessons 5-9, eventually doing statistical comparisons in Lesson 11.

Notes about Use in This Unit: While not specifically referenced in any Mathematics lessons, this source provides a good general reference for understanding population trends relative to the nutritional indicators and information studied and for additional student research in conjunction with the final performance task.
