**Lymphocyte specific heterogeneity in the rat leucocyte common antigen (T200) is due to differences in polypeptide sequences near the NH2**

Like other lymphoid organs, the spleen is compartmentalized. Like other lymphoid organs, the spleen is compartmentalized.

**Heterogeneity of memory marginal zone B cells in the rat — the University of Groningen research portal**

These cells have unique properties, and seem to play a critical role in the responses to micro-organisms in the blood.

**T**

We found that most cells are naïve B-lymphocytes, i. Different compartments harbor different populations of lymphocytes, subpopulation of the white blood cells.

**Lymphocyte abnormalities in the BB rat**

The antigenic determinants seen by all these antibodies were lost when L-CA was reduced and alkylated. Identification of a glycoprotein-like molecule at the cell surface of rat thymocytes.

**The rat B cell system: the anatomical localization of flow cytometry**

Evidence for functional heterogeneity related to the surface phenotype of T cells. This is reflected by mutations in the genes that encode for the immunoglobulins. Suppressor T cells arising in mice undergoing a graft-vs-host response.

**Molecular and antigenic heterogeneity of the rat leukocyte**

Different Ly antigen phenotypes of in vitro induced helper and suppressor cells.
