## Electrolyte Imbalance

Once the deficit has been replaced, an oral maintenance solution containing less Na should be used. This condition is the result of your kidneys not properly responding to ADH, so desmopressin is not a treatment option.

## Fluid in the Lungs: Major Causes and Best Treatments

ADH then concentrates the urine by triggering the kidney tubules to release water back into your bloodstream rather than excreting as much water into your urine.

## Fluid Retention

Duplication for commercial use must be authorized in writing by ADAM Health Solutions. This can create a problematic situation since you effectively have a pool of bacteria, toxins, and other nasty things sitting around and growing instead of getting filtered.

## Dehydration

This body mechanism maintains the normal concentration of the electrolyte and balance of the fluid. Hans Keitel, is to describe the pathologic physiology of body fluids in quantitative terms. A less common cause is aldosterone hyposecretion Addison disease, which results in inadequate sodium and water reabsorption by the kidneys.

## Lymphedema: Causes, Symptoms, Risk Factors and Treatments

Breast feeding and oral rehydration at home during diarrhoea to prevent dehydration. As a result, excess fluid builds up in the body. If your pleural disorder is caused by a disease such as COPD, be sure to follow the treatment plan for that condition.

### **▷ Hyponatremia**

Treatment of hypervolemia differs from person to person depending on the cause of the condition. A mild case can happen after eating a meal that is high in salt. This can interfere with blood flow through your chest and cause your blood pressure to drop.

## **Electrolyte Imbalances: Symptoms, Causes, Diagnosis, and Treatment**

Generalized body swelling is also known as anasarca and is often a medical emergency.
