Twin

The two eggs, or ova, form two , hence the terms dizygotic and biovular. Behavior of gases, liquids, and solids.

Twin

During natural mating, semen is deposited in the anterior portion of the vagina.

Twin

Superfetation occurs when a second fertilized ovum implants in a uterus already containing a pregnancy of at least one month.

The physiology of twinning : Newman, Horatio Hackett, b. 1875 : Free Download, Borrow, and Streaming : Internet Archive

A larger body seems to be better capable of handling the additional stress of carrying twins. Calcium loss through the nephrons as well as fetal absorption. Intrapartum death, which is more common, occurs when a baby dies while the mother is giving birth.

The embryology of conjoined twins

Intended to provide a strong chemistry background for students pursuing life science related majors or careers in life science related fields. Applications, including optimization and related rates problems. There is an increased possibility of potential complications as the birth weight of the baby decreases.
