California : Vanishing Habitats and Wildlife by Peterson, B. Moose

Big rains in December and February replenished some of the habitat that had been drying up — and allowed birds to spread out, diminishing chances for them to spread illness.

Salton Sea

The condors history and humans are closely linked each other.

Biodiversity is critical to future health of California's ecology and economy

In the past century, California has lost more than 90 percent of the estimated 4 million acres of wetlands that once spread across the state.

Natural Communities and Habitats

The monarch butterflies are back at the Pacific Grove butterfly grove.
