Down syndrome in children: a guide

Down Syndrome Research and Practice, 7 1, 17-24. In these programs, each child receives individualized multisource stimulation. However, the toxicity of some chemotherapeutic agents is increased in patients with Down syndrome.

Down Syndrome Factsheet (for Schools) (for Parents)

For children who use hearing aids, wax can cause feedback a whistling noise. Phonological loop difficulties will affect both vocabulary learning and grammar learning.

Emotional well

In this situation hearing aids may be helpful until the child is older and the operation to insert grommets can be performed. Thinking, reasoning and remembering, for example, are usually carried out in mind as 'silent speech'. Examples include amplification devices for hearing problems, bands that help with movement, special pencils to make writing easier, touchscreen computers, and computers with large-letter keyboards.

Tips for Parents of Children With Down Syndrome: Receiving the News, and What Comes Next

In 4 to 5 percent of cases, the syndrome is caused by a translocation link of one chromosome 21 to another, usually a chromosome 14 or the other chromosome 21.

Mental Health Concerns and Down Syndrome

Many children will learn to read and write. If the adenoids enlarge they may block the eustachian tubes.

Down Syndrome: Symptoms, Causes, Treatments

The NICHD has conducted and supported Down syndrome research since its founding, including development of animal models to help study the syndrome, examination of specific genes and gene groups that may play a role in the syndrome, understanding how maternal age plays a role in the disorder, and development of new methods of diagnosis prenatally and postnatally.
