### How to Photograph Architecture: The Complete Guide

Back lighting is the worst kind for architectural photography because it creates very uniform, dark surfaces. Harsh sunlight at midday can help create a high contrast photo to highlight shapes within the structure — or use overcast light for a flatter photo. Be sensitive to the direction of light as this can increase contrast, shadows, textures and reflections.

### Guide to Architectural Photography (+12 PRO Tips!)

However, if you take a look at the work of these amazing artists, you will learn many ways of making mundane objects appear majestic. You can even try a to get creative with the lines of a building.

### The Ultimate Guide to Architecture Photography (98 Tips!)

Then you can layer all of the shots in Photoshop and erase the people from each layer, revealing the layers underneath with a clear view. But structure photography is often used for the documentation of structures, and in those cases, people will expect your images to represent reality as much as possible.
