It is well known that the children of parents who have a long life are also likely to reach a healthy age, but it is not known why, although the inherited genes are probably important. Our approach to care is based on 20 years of our extensive research, experience and knowledge. This can often lead to serious nutritional challenges like eating less often or choosing a processed option over fresh.

## Achievements

Other research contradicts this, however, and has found that this theory does not apply to centenarians from , for whom other factors probably play a more important role. Cognitive change is noticeable when we compare how 6-year olds, 16-year olds, and 46-year olds think and reason, for example.
