The birder's handbook: a field guide to the natural history of North American birds.

## Mccroskey Mona Lange

Arizona gray squirrels use leaf nests, or dreys, extensively throughout the year.

## Mccroskey Mona Lange

These animals inhabit the shrubby grasslands that span the U. Historically, mixed conifer forests in the Pinalenos experienced a low severity fire

every 4 to 6 years, and spruce-fir forests experienced infrequent stand-replacement burns every 300 years. There are many species of these two life forms, but few succulents and trees grow there.

#### **CRL: Other Research Projects: Other Species of Interest**

Inventories are point-in-time surveys that help us learn about the resources in our parks. Selected deciduous and cedar trees about 1 percent of the previous stand have been left standing. The grasslands support several species of birds with declining populations, including Baird's sparrow, lark bunting, Sprague's pipit, chestnut-collared longspur, and McCown's longspur.
