The principles of wealth and welfare; economics for high schools : Raper, Charles Lee, 1870

A 2018 report by The Education Trust found that in 20 states, high-poverty districts receive at least 5 percent more per pupil in combined state and local dollars than affluent districts. These problems help create a vicious cycle of poverty in which children of the poor are often fated to end up in poverty or near-poverty themselves as adults.

What Is Economics?

Policies that focus on education, job training, and skills and that facilitate job search and job mobility seem to me to be a promising means for moving toward that goal. Yet students in poverty are less likely to attend preschool programs. The bottom 20% of households would receive 20% of income; the bottom 40% would receive 40%, and so on.

Lessons for the Young Economist

The Buddhist economy is very much like the simple living advocated by Thoreau.
