Now imagine that we have the same numbers sorted in the ascending order: 6, 9, 12, 23, 48, 50, 77, 79 and 90. This unit can then be used in programs wherever that particular should be performed. First, you could list largest and i in a LOCAL statement within the DEF structure.

Computational Physics Sample Programs

A single line can contain multiple commands separated by colon. Subroutines have a fixed number and type of arguments, but the last arguments may be given default values with an initializer.
