## The Harvey Lectures, Delivered Under the Auspices of the Harvey Society of New York, 1906

Aside from a possible, very brief, rise in blood- pressure, sodium bicarbonate intravenously or otherwise brings no visible benefit to a dog dying of acidosis.

The fact that salt starvation has not had this effect in other such experiments perhaps adds to the evidence of personal idiosyncrasy. Take away or diminish or increase the minute traces of calcium or potassium salts in the blood-plasma, or the traces of various substances supplied to the blood by other organs; or add traces of certain other substances: the reactions of the protoplasm are quickly altered, and its structure may be destroyed. Fitz the acetone bodies in blood and urine.

## The Harvey Lectures, Delivered Under the Auspices of the Harvey Society of New York, 1936

THE NEW PHYSIOLOGY 25 ment which are the wider the more highly developed the organism is, the normal life history of each individual is fulfilled. But both the permanent establishment of the practical treatment on a basis not shaken by every wind of doctrine, and the full determination of the theoretical and scientific significance of the changes thus produced in the dia- betic condition, require a clear demonstration of the principles at issue in animal experiments, in which all extraneous and acci- dental factors can be excluded, and facts concerning the role of fat in relation to diabetic glycosuria and carbohydrate metabolism can be proved by methods beyond the scope of the personal equation.

## SKC

There are great differences between species, which are inde- pendent of the natural sugar tolerance, diet, pancreatic structure, or any other known factors.

## **The Harvey Lectures, Delivered Under the Auspices of the Harvey Society of New York, 1906**

High glycosuria and acidosis can be produced by continuing such an experiment, but safety required checking the injury here by a fast-day. Many of the speakers were the recipients of the Lasker Award or the Nobel Prize.
