2016.

Scuba diving

, breathing gas monitoring, and decompression status monitoring are carried out to ensure that the dive plan is followed and that members of the group are safe and available to help each other in an emergency. Decompression may follow a pre-planned series of ascents interrupted by stops at specific depths, or may be monitored by a personal decompression computer. The problem becomes severe and immediately life-threatening if the diver loses both consciousness and the mouthpiece.
