Geology of Ontario

Sabina 2000 , Rocks and Minerals for the Collector, Cobalt-Belleterre-Timmins, Ontario and Quebec. Early Precambrian rocks of the Timiskaming region, Quebec and Ontario, Canada: Geol.

GLASNOST Berlin

Outcrop 2: Waste Management Site, 666 Wild Life Road - at Southern boundary of Perth - Photo 2.

January 1998 North American ice storm

Sabina 1983 , Rocks and Minerals for the Collector; Kingston,Ontario to Lac St. The concentration of the ore is greatest towards the middle of the bed, where nodules and patches of pure red hematite, running with the stratification, occur at intervals of a few inches, the thickness they display not exceeding a couple of inches. There are even small deposits of fluorite, feldspar, graphite, magnetite, apatite and garnet.

January 1998 North American ice storm

The ripple marks are evidence of wave action in an aquatic environment, but it is the curved lines that are the most important feature of each photo. The sandstone outcrops on both sides of the road close to a private museum just south of where the road crosses the Tay River. The Parautochthon is a band running parallel to the , which varies in width from Labrador to northeastern on.

Where are Gold Deposits in Canada

Mining operations date from 1860. Mining development now carried on much more scientifically; some examples.
