Perfume and flavor chemicals (1969 edition)

There is clearly a person behind these entries, a person with many strong opinions about chemicals, perfumery, and his fellow perfumers. Every flavor and fragrance creation group around the world must have the two volumes in their possession because the information contained therein is not readily accessible anywhere else. Or

Perfume and Flavor Chemicals (Aroma Chemicals) Vol.1

Each volume contains not only a pertinent aroma description of each material and its physical state whether liquid or solid but also its chemical structure, solubility information and one or more methods used to synthesize it. The vapors of this chemical have a hypnotic effect on the human Central Nervous System. This unpagged book is composed of entries, alphabetical by chemical name, of substances used in the flavor and perfume industries.

The following pie chart shows world consumption of flavor and fragrance products: Analysis of global consumption by product category over time shows that the use of aroma chemicals which are primarily synthetic has increased at the expense of essential oils and extracts of natural origin, despite increased consumer interest in natural ingredients.

Flavor and Fragrances

The entries have not only the chemical name but any trade names or variations under which a material sold, the chemical structure, a word on its uses or potential uses, a note on how it is produced, as well as killer little descriptions of its smell and taste. Many consumers believe that natural ingredients are safer, healthier, and better for the environment than their synthetic counterparts. These reprints are the same content in three volumes instead of two.
