## AMNIOTE PHYLOGENY AND THE IMPORTANCE OF FOSSILS, Cladistics

The manner in which the pleura of each side is reflected backwards from the posterior aspect of the sternum must now be investigated.

### Full text of of Practical

The hilum is surrounded by the reflection of the pleura from the surface of the lung on to the pulmonary root. Only three cases of syphilitic aortitis have been observed. Slieon and Goats, Quart J.

## Pathology of Sudden Death, Cardiac Arrhythmias and Conduction System

Left Tympanic Membrane as viewed from the external auditory meatus during an otoscopic examination. The cardiac branch from the left pneumogastric nerve is the smaller of the two, and as a general rule it lies nearer the phrenic nerve than the other. We have no evidence to substantiate this idea.

### Full text of of Practical

»She still presents signs and s. Cardiac enlargement, as measured by percussion, was more pronounced in the female. In Table III the important cardiac symptoms are analyzed with respect to their frequency, severity and duration.

### Full text of of Practical

At first the aortic arch lies in front of the trachea ; afterwards it is placed to the left of the trachea, the oesophagus, thoracic duct, and the left recurrent laryngeal nerve Fig.

**Incomplete division of the atrioventricular canal with patent interatrial foramen primum (persistent common atrioventricular ostium):  
Report of five cases and review of the literature**

Transverse section through the neck at the level of the isthmus of the thyroid body to show the arrangement of the cervical fascia. The relation of pulse rate to pulse pressure.

**Full text of Heart**

Therefore there was no increased flow of blood through these coronary vessels when the minute volume put out by this heart increased 50-100 per cent or more and the mechanical work of the heart muscle increased correspondingly. There was no thyroid enlargement.

**Incomplete division of the atrioventricular canal with patent interatrial foramen primum (persistent common atrioventricular ostium):  
Report of five cases and review of the literature**

The symptoms and signs were extremely severe in five 30 per cent of our cases. T-wave in neurocirculatory asthenia simulating the thyroid T-wave.
