Research and Measurement Issues in Gambling Studies, Volume 1

As noted above, the relative infrequency of problem and pathological gambling in the general population means that surveys must either recruit and screen very large numbers of respondents to identify adequate numbers of problem gamblers for subsequent analysis or use one of a variety of strategies to prescreen or filter respondents to reduce the number of people assessed. The task force, which met for the first time in March, has grown to 36 members.

NCCN Task Force Report: Specialty Pharmacy in: Journal of the National Comprehensive Cancer Network Volume 8 Issue Suppl_4 (2010)

In general, survey data must be weighted prior to analysis to account for differential probabilities associated with selection, response rates, and population coverage rates. Procedures, regulations, and doctrine for some of these areas are already established within DOD, and are not therefore within the purview of the Task Force.

To ensure the future of the U.S. racing industry, the betting business has to change

Both providers and specialty pharmacies should educate patients to have reasonable expectations about when medications will be delivered from a specialty pharmacy.

Ontario Ministry of Finance

Use of random sampling makes it reasonable to generalize the results from the sample to the population. Other decisions relate to the challenges of achieving an acceptable response rate, one important measure of the representativeness of the sample, and of properly weighting the results of the survey to yield unbiased information about gambling and problem gambling in the population.

High

Population Surveys 45 Although response rates alone should not be the sole measure of survey data quality, they are a crucial indicator of potential nonresponse bias and, hence, the representativeness of the sample. Campbell 541 , Department of Criminology, Douglas College, New Westminster, British Columbia, V3L 5B2, Canada David M. Fault Detection System design must be such that faults — malfunctions of either the equipment or the Supervisor software — are readily detectable.

High

As could be observed in the policy recommendations, there are two types of environments in which secure computing systems operate. More recent studies include indepth ethnographic accounts of gambling in specific settings, such as the culture and kinship of the British racecourse Cassidy 2002 and the local rituals of gambling in a Greek community Malaby 2003. Face-to-face interactions between the patient and the pharmacist can also assist in this exchange of information, and should be an available option when specialty medications are dispensed.
