Aspects of Whitehead's Philosophy of Organism

Rather, the work is primarily expository in character, drawing together a number of previously divergent and scattered themes of mathematical investigation into the nature of spatial relations and their underlying logic, and presenting them in a systematic form. There is no absolute dichotomy and magical transformation of matter into mind via some unknown causal line, as is the common concept today.

Alfred North Whitehead's Philosophy of Organism

Half a century later, in the 1930's, the Apostles would be taken over by Kim Philby, Anthony Blunt and other Stalinist moles. This failure resulted naturally from the atomistic features of his metaphysics, epistemology and logic. But nevertheless, so the argument goes, in the overall course of processual change tends to the development of ever richer, more complex and sophisticated conditions of occurrence.

Whitehead's Philosophy of Organism

The many become one and are increased by one. Process philosophy is based on the premise that being is dynamic and that the dynamic nature of being should be the primary focus of any comprehensive philosophical account of reality and our place within it. When first abiding in such a realization, one has no awareness of conventional reality at all.

The underlying erroneous presupposition of anti-realism is that perception is only the representation of an object, or in general terms, of an external world. Creativity is passion, but as yet without a pattern. For Russell, the logicism project originated from the dream of a rock-solid mathematics, no longer governed by Kantian intuition, but by logical rigor.

Alfred North Whitehead (1861

In addition, he continued with the themes of his earlier triad, arguing that objects in general, and matter in particular, are abstractions.

Alfred North Whitehead (1861

It calls to mind Ouroboros, the worm of myth, which thrives by consuming its own tail. Whitehead, half Platonist and half processist, ingeniously attempted to integrate incompatibles.
