### Cataract surgery complications, side effects and risks

So only one laser treatment is required to permanently eliminate vision loss caused by posterior capsule opacification after cataract surgery. Cataract extraction CE in diabetic patients as compared to non-diabetic patients is associated with higher risks of reported complications such as capsular contraction and opacification as well as post-surgical worsening of macular edema ME and diabetic retinopathy DR. To prevent glaucoma, make sure you continue to get regular eye exams after your cataract surgery to catch the condition before it becomes worse.

### 4 Common Side Effects After Cataract Surgery

This makes the light to once again pass directly to the retina and helps to restore vision back to what it was soon after the original cataract procedure. This condition places you at risk of malpositioning or dislocation of the lens implant.

### Cataract Surgery Risks Leesburg, Eustis, Clermont

You can find out if you are a candidate for cataract surgery by reaching out to an ophthalmologist for a screening.

### Cataract surgery complications, side effects and risks

The very back of your lens the lens capsule is left intact to serve as a place for the artificial lens to rest. Seek immediate help if you notice that you are seeing double or if you have any complications at all related to your eyesight. With an IOL, a person usually has better eyesight because light will be able to pass to the retina.

### Cataract Surgery Complications

During a cataract surgery, the surgeon opens the front portion of the capsule and removes the natural lens to replace it with the intraocular lens. When caused by surgery, ptosis will typically disappear on its own after a couple of months. Following a YAG laser capsulotomy, you may resume normal activities immediately.

### Cataract surgery complications, side effects and risks

This could be an indication that something is wrong with the artificial lens, such as an infection or tearing of part of your eye.
