emergency relating to a possible major accident in its area will be dealt with.

### 49 CFR § 192.619

However, the size of this fire will be limited by the size of the original small hole in the natural gas pipe. Detailed Overview Introduction Recent significant growth in the nation's production and use of natural gas is placing unprecedented demands on the Nation's pipeline system, underscoring the importance of moving this energy product safely and efficiently.

### Natural Gas Delivery System Materials

PHMSA Response PHMSA appreciates the information provided by the commenters regarding the grace period for IM reassessment intervals. In addition, the material properties verification and documentation requirements PHMSA proposed are critical to performing fracture mechanics analysis of ILI-discovered defects that would be accurate enough to establish MAOP in a way that is demonstrably equivalent in safety to a pressure test. Pressure gauges and emergency valves are part of the assembly.

### Federal :: Pipeline Safety: Safety of Gas Transmission Pipelines: MAOP Reconfirmation, Expansion of Assessment Requirements, and Other Related Amendments

Intrastate pipelines, on the other hand, transport natural gas within a particular state. The increased stress from the test pressure may cause latent

### A Presentation on Pipelines

The local authority must prepare an emergency plan which details how an

cracks that are almost, but not quite, large enough to fail to grow during the test.

#### **Oklahoma Pipeline Awareness [National Pipeline Mapping System]**

In addition to this pressure reduction, operators of these lines would be required to perform external corrosion direct assessments in accordance with the IM provisions, develop and implement procedures to evaluate and mitigate any cracking defects, conduct a specified number of line patrols at certain intervals, conduct periodic leak surveys, and odorize the gas transported in the pipeline segment. In 2003, plastic pipe accounted for one-half million miles of distribution main.

#### **Oklahoma Pipeline Awareness [National Pipeline Mapping System]**

Another public commenter suggested removing references to cracks in these sections if PHMSA was intending to create a new section dedicated to addressing crack defects.

#### **Federal :: Pipeline Safety: Class Location Requirements**

This final rule also advances the important discussion about the need to adapt and expand risk-based safety practices. This rule also explicitly requires devices on in-line inspection ILI , launcher or receiver facilities that can safely relieve pressure in the barrel before inserting or removing ILI tools, and requires the use of a device that can indicate whether the pressure has been relieved in the barrel or can otherwise prevent the barrel from being opened if the pressure is not relieved.
