Double Blinds, and Reflexive Loops: An Alternative by Vernon E. Cronen, Kenneth M. Johnson et al.

Since in a cumulative hierarchy, there can be no sets containing themselves, no universal set, and no non-wellfounded sets, none of the known paradoxes can immediately be formulated in the theory. The conclusion drawn is that a stratification of the universe is not itself sufficient to avoid all paradoxes—the stratification also has to be well-founded.

Structural Reflexivity and the Paradoxes of Self

More precisely, we have the following theorem due to Montague 1963.

Leonard Goddard, The nature of reflexive paradoxes: Part I

ZF has a privileged status among set theories, as it is today the most widely acknowledged candidate for a formal foundation of mathematics. This concludes the proof of 2. However, Priest 2010b, 2013 argues that it still fits the inclosure schema and can hence be seen as a paradox of self-reference, or at least a paradox that should have the same kind of solution as the paradoxes of self-reference.

Double Blinds, and Reflexive Loops: An Alternative by Vernon E. Cronen, Kenneth M. Johnson et al.

Predicate and Set-Theoretic Calculi Based on Logic Without Contractions. The result is based on the notion of a Turing machine, which is a generic model of a computer program running on a computer having unbounded memory. Moss, 1996, Vicious Circles—On the Mathematics of Non-Wellfounded Phenomena, Stanford: CSLI Publications.

15 Paradoxes That Will Make Your Head Explode

Tournament chess is an example of a well-founded game. According to this line of thinking it just seems unprincipled to lay the blame for paradox on particular pieces of vocabulary, because no particular vocabulary seems to be required for paradox.
