## Diagnosis and Treatment of Primary Lymphedema Consensus Document of the International Union of Phlebology (IUP)

Thus, most ADLA attacks were observed by clinic staff; a few attacks were recorded on the basis of patient history and the presence of residual clinical signs e. Comment Primary and secondary lymphedema are progressive incurable conditions that have historically defied both medical and surgical attempts to effectively decompress the chronically swollen extremity.

## Evaluating the Burden of Lymphedema Due to Lymphatic Filariasis in 2005 in Khurda District, Odisha State, India

Some surgeons combine this procedure with liposuction and postoperative compression claiming favorable outcome, which makes it difficult to evaluate the surgical procedure per se. Lymphedema: A Concise Compendium of Theory and Practice.

## Diagnosis and Treatment of Primary Lymphedema Consensus Document of the International Union of Phlebology (IUP)

The document is not meant to override individual clinical considerations for complex patients nor to stifle progress. On some occasions an invasive study is required to provide more information for an accurate differential diagnosis. When evaluating five-year outcomes following these procedures, certain observations were made.

## Clinical Surgery for Lymphedema: Historical Perspectives

Countries with LF are encouraged to conduct burden assessments to decide how best to implement lymphedema management programs.

## Lymphatic edema, elephantiasis (1911 edition)

Contemporary management of chronic lymphedema is now based on Decongestive Lymphatic Therapy DLT. In all areas where cellular infiltrate was observed, lymphocyte and macrophage cell populations were assessed together with respect to infiltrate intensity because activated

lymphocytes were difficult to differentiate microscopically from macrophages.

### **Woody Edema of the Legs**

Most of the currently available staging systems reflect only tissue turgor and limb shape, etc and neglect other critical clinical information e. Sometimes patient selection, choice, physical ability as well as cost need to be taken into consideration particularly when assessing mobility and future compliance.
