## A quest for quality care: Exploration of a model of leadership relationships, work engagement, and patient outcomes

And that is why, after all, there is such a flourishing dialogue between these two disciplines going on today. It would, however, be missing the point to think that we need not trouble ourselves about the conflict between science and religion. IV I now come to my second reason for the modern fading of interest in religion.

### Religious Conflicts

Up until the late 19th century, scientists were typically Christian believers who saw no conflict between their science and their faith—people like Kepler, Boyle, Maxwell, Faraday, Kelvin, and others. Examples of Concentrations The following are meant to illustrate areas of concentration.

### Focus On...

Eventually, Galileo confesses to making the Copernicus case, the fact that Copernicus believed that the sun was the center of the universe, too strong and offered to disprove the theory of the heliocentric system. Design A cross-sectional survey design.

### Religious Conflicts

Darwinian evolution by natural selection soon threatened the reigning compromise, by explaining how humans are entirely natural, and no souls or direct creation needed.

### A Social History of Women in Ireland, 1870

This reaction is of a mixed character, including elements of emotion derived from our lower natures. But this is unacceptable for modern science. In this way, they gradually came to see God less and less as an explanation for anything.

The universe began to exist. The new science discarded all of these as ways of understanding nature and set up experience—experiment and critical observation—as the foundation and ultimate test of knowledge.

**The Maya: History, Culture & Religion**

And we would find equally insane the idea that any arrangement of sand particles at that place is improbable and so there is nothing to be explained. We will approach these questions by considering the history of biology as the history of philosophical attempts at making sense of life, broadly conceived, from Aristotle to Darwin.
