## Ethical Guidelines, Federal Regulations and State Statutes

To the extent that it is appropriate, the development of clear protocols for managing any distress that might be experienced by participants during the process of data collection or conduct of research procedures is an important component of planning research.

## Resources for Research Ethics Education

The Introduction to this National Statement contains a definition of participants and notes that the impact of research on wider populations is an important ethical consideration in the design, review and conduct of human research. In genomic investigations, there may be a strong relationship between the research and clinical contexts such that there may be clinical implications of research results or findings.

## The Belmont Report. Ethical principles and guidelines for the protection of human subjects of research

These levels are described in paragraphs 5. Where a researcher believes there are valid reasons for not making data or information accessible, this must be justified. When is ethical review needed? It is a statement of basic ethical principles and guidelines that should assist in resolving the ethical problems that surround the conduct of research with human subjects.

## Ethical principles in the conduct of research with human participants (1982 edition)

Its content reflects the outcome of wide consultation with Australian communities who participate in, design, conduct, fund, manage and publish human research. The National Statement identifies some specific Commonwealth legislation that refers to the National Statement.

## The Belmont Report: Three principles for ethical research

Where researchers consider that the results must be provided to participants, the project should be designed to include the mandatory return of

results and this condition should be clear in any information materials. Researchers planning to do any type of research involving Aboriginal and Torres Strait Islander peoples must consult and follow the advice in the most contemporary versions of and as well as the GERAIS produced by the Australian Institute of Aboriginal and Torres Strait Islander Studies. First, research participants may enter into a relationship with researchers whom they may not know but need to trust.

### **Guidelines & forms**

Section 5: Process of research governance and ethical review Human research encompasses a wide range of activities with an equally wide range of risks and potential benefits. Issues of justice arise most strongly around questions about the selection of participants.

### **Ethical Principles**

Depending upon the circumstances of an individual project it may be justifiable to employ an opt-out approach or a waiver of the requirement for consent, rather than seeking explicit consent.
