Coronavirus and the Nervous System

You could stack approximately 70,000 synaptic gaps in the thickness of a single coin! Another way to look at the brain is to consider the brain stem, the Cerebellum, and the Cerebrum. None of your senses would be useful without the processing that occurs in the brain.

Brain and Nervous System

Common symptoms include excess or absence of sweating, heat intolerance, and drop in blood pressure upon standing. The disease also can damage the muscles that help us breathe. In rare cases, some individuals may develop new symptoms called sequelae that stem from but were not present at the time of initial infection.

Basic Structure and Function of the Nervous System

Symptoms of peripheral neuropathy vary depending on the type of nerves—motor, sensory, or autonomic—that are damaged.

The hidden long

Weber was particularly interested in the sense of touch. Frontal Lobe The front most anterior part of the cerebrum; anterior to the central sulcus and responsible for motor output and planning, language, judgment, and decision-making. Some people with COVID-19 either initially have, or develop in the hospital, a dramatic state of confusion called delirium.

A Neurosurgeon's Overview the Brain's Anatomy

COVID-19 can cause blood clots in other parts of the body, too. People who require intensive care for Acute Respiratory Distress Syndrome, regardless of the cause, usually have a long period of recovery.

Neuroscience, Brain & Mind

The hypothalamus handles information that comes from the autonomic nervous system

The Brain and Nervous System

Temporal Lobe The part of the cerebrum in front of and anterior to the occipital lobe and below the lateral fissure; involved in vision, auditory processing, memory, and integrating vision and audition.
