Translational Challenges With Tonic Immobility

Watson and Thorndike, the first learning theorists, had promised to build a better world with learning theory, and the neo-Hullians felt that the time had come to make good on that promise.

Discrimination Reversal Facilitates Contextual Conditioning in Rats' Appetitive conditioning in: Psicológica Journal Volume 39 Issue 1 (2018)

In human, a physiological counterpart of defensive motor responses has been described in several studies demonstrating that the actual pain induces a modulation pattern on the primary motor cortex M1 excitability. Diez años de análisis del papel de la atención al contexto en la recuperación de la información. Skinner Some found comfort in B.

Aversive Learning

First, individuals may actually come to fear the TI response in future attacks, contributing to their sense of uncontrollability and unpredictability of their own reactions.

The role of learning in threat imminence and defensive behaviors

These findings add to existing literature by indicating that impairments in inhibitory behavior during adolescence do not reflect an inability to learn to inhibit a response, but instead reflect a specific deficit in expressing that learning. Before Baseline Pre and after Baseline Post each experimental block, five baseline conditions with a fixation cross was presented associated with TMS stimulation.

Learning Theory: A History

The mean Pre-CS and Post-CS food cup behavior was calculated across sessions and collapsed across the two trial types and subjected to an independent measures t-test. So the loss of this particular hypothesis should not have hurt the basic Hullian program.

Aversive Learning

Starting, and looking half round, I saw the lion just in the act of springing on me. Learning theories are basically untestable. Raw MEPs recorded from APB and ADM muscles in one representative subject of the Pain Group are shown.

Learning, Motivation, and Cognition (June 1997 edition)

Reversal discrimination did not facilitate concurrent conditioning of the new stimulus, but there was a trend towards facilitation of contextual conditioning, measured by magazine entries in the absence of stimuli, that was confirmed in Experiment 2. Am J Psychiatry 151: 1791— 1796.

Discrimination Reversal Facilitates Contextual Conditioning in Rats' Appetitive conditioning in: Psicológica Journal Volume 39 Issue 1 (2018)

Second, an overreliance on the TI construct may inadvertently shift the focus away from a potentially more common, more volitional survival strategy, namely acquiescence in the face of an inescapable situation. Data are means \pm SEM.
