## CAB Direct

Vital signs were within normal physiological limits. Bathing without soap will remove the uremic frost that compounds itching; bath water will be yellow from the urochrome pigments. An enlarged prostate can obstruct the flow of urine, preventing the bladder from emptying completely.

## Calcium Oxalate Stones

A large calculus, called a staghorn calculus, can fill an entire renal calyceal system. Pruritus, also common, is thought to be the result of a buildup of the urochrome pigments in the skin as well as the crust of urate crystals that accumulates on the skin called uremic frost. Evaluate pulses, capillary refill, skin turgor, and mucous membranes.

## Urinary Calculi

Patients with devices in the bladder, such as catheters, can develop bladder stones from crystals that form on the device.

## Urolithiasis Nursing Care Plan & Management

Cite this chapter as: Pyrah L. Your healthcare provider will look at your overall health, diet, and lifestyle and recommend the right amount of fluid you should have each day. The hematuria is typically intermittent, so it may be ignored initially.
