## Woody biomass from short rotation energy crops

Long-term study of above- and below-ground biomass production in relation to nitrogen and carbon accumulation dynamics in a grey alder *Alnus incana* L.

## Woody biomass from short rotation energy crops

Overall, sustainable production of fuels, chemicals, and fibers from woody biomass depends on a combination of feedstocks from both forests and plantations; the importance of dedicated SRWC feedstock production systems is highlighted.

## British Library EThOS: Biomass production, population structure, and self

Moench plantation on former agricultural land.

## Long

The four genera include: *Populus* cottonwoods, poplars, aspens , *Salix* willows , *Pinus* southern pines , and *Eucalyptus* eucalypts. FRB was strongly correlated with the stand basal area and stem mass.

## British Library EThOS: Biomass production, population structure, and self

In the Northern and Baltic countries, grey alder is a prospective tree species for short-rotation forestry. Current efforts to maximize production are

described.
