**CDC**

They can create major nutrient deficiencies and digestive problems, as they rob us of our vital vitamin and mineral nutrients and amino acids needed for digestion. If people with contaminated hands touch food—in restaurants, grocery stores, or homes—the food may become contaminated.

## Parasite Infections: Functional Lab Analysis To Identify Parasites

The symptoms of parasitic infections depend on the parasite. In North America and Europe, parasites rarely cause serious complications.

## 21 Signs You Might Have Parasites and What to Do About It

Some of these parasites form cysts that can live for months outside a host. You can also get the parasite through anal sex.

## What is a Parasitic Infection? (with pictures)

The parasite, called Acanthamoeba, is found in water and soil worldwide, and can enter a person's body through cuts on the skin, contact-lens solution or inhalation, according to the CDC.
