What Is Marine Biology? ~ MarineBio Conservation Society

Current Biology, 28 15 :2506—2512.

Marine Ecology Research Centre (Pulau Gaya)

Marine ecology may study prey and predator relationships in specific areas.

Marine Ecology

This is also an important field for help in understanding how to protect endangered species, or how to help species whose habitats are threatened by man or natural phenomena. This includes invertebrates like shrimp and crabs, cod and flatfish, marine mammals and birds.

Marine Ecology ~ MarineBio Conservation Society

Ecosystems can remain relatively stable when untouched by catastrophic events, detrimental human activities, or other unusual occurrences. People on board are able to steer and avoid these hazards more easily than a crew on a support ship who are relying on cameras to see what is happening.

Marine Ecology ~ MarineBio Conservation Society

A grouping of populations of plant, animal, or microscopic organisms is referred to as a biocenose. The first level in the food chain is primary production, which occurs at the microbial level. The soil in these marshes is often made up of mud and a layer of organic material called peat.
